THE TREATMENT OF BRONCHIAL ASTHMA WITH AIR IONS. [1962] 6p. 12 refs.
Order from OTS or SLA $1.10 62-18254

Trans. of Klin[icheskaya] Meditsina (USSR) 1950, v. 28, [no. 6] p. 72-74.

DESCRIPTORS: Therapy, *Asthma, *Air, *Ions, Particles, Blood chemistry.

Light air ions with a negative sign, utilized without the use of side physical influences or chemical substances, possess a certain physiological action. When a therapeutic dose of light air ions with a negative sign (about 100-150 billion in one session) is utilized, the composition of the blood improves and the resistance of the serum colloids becomes stabilized. The course of treatment for bronchial asthma consists of 10-30 sessions. (Biological Sciences--Pathology, TT, v. 9, no. 5)(over)

Order from OTS as SLA 61-10 62-15313

DESCRIPTORS: *Intestine, Pathology, *Diagnosis, Etiology, *Therapy, Penicillin, Procaine, Surgery.

Ileitis does not possess a characteristic symptom-complex; the pre-operative diagnosis is fraught with difficulties. In actual practice ileitis is encountered more frequently than is described or diagnosed. The tactics of the surgeon and the character of his operative interference depends on the clinical picture of the illness, the operative findings and the patient's general state. (Author)

The end results of gastric resections performed on youthful peptic ulcer patients are good. (Author)
